Vocational School of Health Services

Administration of Health Institutions

The primary purpose of healthcare systems is to ensure that the health services required by society are delivered at the appropriate time, with the desired quality, and at the necessary level. Today, healthcare services have become an important part of our economy. In order to provide healthcare services efficiently and effectively and to manage healthcare institutions in line with modern management principles, it is essential to employ highly qualified human resources. The Healthcare Institutions Management Program plays an important role in training the qualified personnel needed by the sector. The main objective of our program is to educate qualified professionals who can work in healthcare services in both the public and private sectors; who understand the sector and closely follow current developments and innovations; who possess strong communication and coordination skills; who are knowledgeable about healthcare management and business administration; and who have acquired the professional skills specific to the healthcare sector. With its young, dynamic, and highly qualified academic staff, as well as a curriculum designed in accordance with technological developments and market expectations, our program is committed to providing high-quality education at the associate degree level. We believe that you will contribute significant value to our program within this framework, and we look forward to welcoming you

Assoc. Prof. EMİNE ATALAY
Head of Program

Program Overview

Healthcare services constitute a field of service delivery in which a wide range of professional disciplines work collaboratively. The rapid development of healthcare technologies and the steadily increasing expectations of patients and service users have made the need for professional management in healthcare services more evident than ever. Healthcare services must be properly organized in order to adapt to changing technologies and expectations, use resources effectively, and remain sustainable. The Healthcare Institutions Management Program aims to train the qualified human resources required by healthcare organizations to achieve these objectives. Our program represents an interdisciplinary field where fundamental healthcare knowledge and terminology intersect with business administration, accounting, and economics, all serving a common purpose. Within the program, students are introduced to a wide range of subjects, including the characteristics of healthcare services and organizations, management dynamics, workflow processes, the effective and efficient use of resources, and effective communication practices.

Management and Organization, Principles of Economics, General Accounting, Medical Terminology, Healthcare Institutions Management, Health Law, Health Economics, Quality in Healthcare Services, Information Systems in Healthcare Institutions, and Medical Documentation are only a few of the courses offered within our program.

We attach great importance to offering elective courses and provide our students with a broad range of options. We make extensive use of information technologies and aim to help students adapt effectively to technological developments. In addition, through the compulsory internship program, our students have the opportunity to combine their academic education with practical experience.

After graduation, our students can pursue careers in a wide variety of organizations, including public and private hospitals, medical centers, oral and dental health centers, pharmaceutical and medical device companies, and health insurance companies.
